PAVE AHEAD

DURABLE. SUSTAINABLE. CONCRETE.

DURABILITY

No other material approaches concrete's strength and durability to handle day-to-day heavy traffic and withstand punishing weather. Concrete stands the test of time.

MATERIALS INNOVATION

Concrete and other cement-based materials can be used in the pavement cross section including cement stabilized soils and bases and roller-compacted and pervious concrete.

CONSTRUCTION

State-of-the-art paving processes and innovative concrete mix design provide the flexibility needed to meet any challenge, including quick opening to traffic.

SUSTAINABILITY

Concrete's light-colored, highly-reflective surface lowers lighting and energy costs while reducing heat island effects. And because it is locally manufactured, concrete reduces transportation-related energy consumption.

APPEARANCE

Concrete's clean, bright look creates a welcoming first impression. And with the ability to be fashioned in an array of textures, patterns and colors, concrete's curb appeal leaves a lasting impression.

AFFORDABILITY

Concrete eliminates rutting, potholes, costly sealcoats and resurfacing, helping to control maintenance costs and providing excellent return on investment.
